

TOFAGRACE-5

Tofacitinib 5 mg Tablets

- It is used to treat moderate to severe rheumatoid arthritis.
- It helps to decrease pain, tenderness and swelling in the joints by reducing inflammation.
- It is an immunosuppressant that blocks the action of Janus kinases, enzymes that play a crucial role in the process of inflammation and damage of the joints.
- It helps to slow the progression of bone and joint damage.

Rheumatoid Arthritis symptoms to **never** ignore
